

# TOLIS Tape Tools™

## TOLIS Tape Tools™ for Mac OS X Provides Seamless Data Migration to Mac OS X

TOLIS Tape Tools is a set of TOLIS-unique data migration utilities that enable the transfer of the contents of any `tar`, `cpio`, or `pax`-formatted tapes onto a Mac OS X system. Regardless of whichever system platform on which the tapes were originally created (i.e. Linux, Solaris, etc), TOLIS Tape Tools flawlessly transfers data to Mac OS X.

TOLIS Tape Tools Includes:

```
tapectl™  
libctl™  
taperead™  
tapewrite™  
tapecopy™
```

Mac OS X includes `tar`, `cpio`, and `pax` utilities, but no native tape device support mechanisms. To migrate data, users simply use the TOLIS Tape Tools to write raw data streams, pulled from the contents on the tapes, to the Mac OS X system. The appropriate OS X `tar/cpio/pax` utility matching the tape format is then used to write intelligible data onto the Mac OS X system.

The TOLIS Tape Tools support every tape technology and tape format, as well as tape libraries regardless of the number of drives or the number of tape cartridge slots. The Tools are also transport layer independent. This ubiquitous level of support means no special drivers are needed—you simply attach the tape device to the Mac OS X system, load the tapes, and begin migrating the data. TOLIS tape Tools is operated from the command line and is fully documented.

### PROTECTING THE MIGRATED DATA

Following the migration of data onto a Mac OS X system, BRU BRU Server™ is available to provide leadership data backup and restore services. TOLIS Tape Tools is included with licenses of BRU Producer's Edition (PE).

### SUPPORT

TOLIS Tape Tools is very straightforward in operation. Support is provided via email.

### PRODUCT HIGHLIGHTS

Easily Transfers Data On Tapes To Mac OS X, Regardless Of The Platform or the Product Used Upon Which They Were Created

High Performance - High Transfer Rates While Incurring Low overhead

Supports All Transport Layers (i.e. SCSI, FireWire, Fibre-Channel, etc.)

Controls All Tape Drive and Tape Library Operation On An OS X System

Supports All Tape Library Configurations, Regardless Of Number Of Drives Or Number Of Tape Cartridge Slots

Tapecopy™ Enables the Duplication Of Tapes Under Mac OS X

### SYSTEM REQUIREMENTS

Minimum G3 500 MHz or better processor

128 MB of RAM

Mac OS X 10.3 through 10.12 (Sierra)
